paper bags.**

# ABOUT

**INTERTRON DOO is a family company whose main activity is the production of paper bags.**

For 20 years, we have been dedicatedly working to establish a sustainable system in the field of paper industry, which is built through gradual and stable development, and is reflected in expertise, innovation, business culture and quality products tailored to customers. Quality without compromise and a simple solution for each client are our main goals, which is why we constantly invest in the highest quality equipment and personnel training.

In addition to the import and distribution of paper, for the last 15 years we have been devotedly perfecting the production of paper packaging, among which paper bags stand out. In order to meet the demands of our clients and provide them with the highest quality products, in 2021 we opened the most modern facility for the production of paper bags in Vršac.

We have been working on a product personalization system for years, so no bag that comes out of our production is without the customer's personal stamp. In addition to paper bags, we also have various types of packaging paper, hygiene paper, cardboard for the food and other industries in our comprehensive assortment.

# PAPER BAGS

---

Known as a grocery bag or a shopping bag, a paper bag is an indispensable part of our lives that makes our daily lives easier.

Our paper bags are made with an inside handle and a square bottom. The flat handle made of high-quality cellulose fibers allows the bag to be used in various areas of business, for a wide variety of products.

Depending on the needs and wishes of the clients, paper bags can be made in different dimensions, in two colors.

Client:  
Tesco

Client:  
Wolt, Wolt Market

Paper bags are very popular among environmentally responsible companies, but they are also an effective tool of advertising.

Client:  
J. Multari, Pagoda,  
Burgerbar

Client:

# DOUBLE LAYER PAPER BAGS

Our double layer paper bag, which has the possibility of reinforced bottom, makes a versatile and durable option for carrying heavier items, such as charcoal, flour or feed for animals. It can be from 140mm to 320mm wide, with or without an internal handle, and printed in up to six colors.

# SELF OPENING SACKS

The self opening sacks can be made of brown or white paper with a grammage ranging from 60 to 90 gr/m<sup>2</sup>. It comes in a variety of sizes, with widths ranging from 8 to 32 cm, and can be single-layered or double-layered for added durability. The square bottom allows the bags to stand upright and can be plain, without any printing, or they can be printed with up to four colors in the line and six colors outside the line.

Client:  
**Sentella, Fidelinka,**  
**Šećerana Crvenka , Sunoko**

# CARDBOARD TUBES

**Cardboard tubes are cylindrical containers made of paperboard or cardboard material. They are often used for packaging a wide range of products, including posters, documents, textiles, food, and beverages.**

Additionally, cardboard tubes are an eco-friendly option for packaging as they are made from renewable and recyclable materials. They can be made from recycled paper, making them a sustainable option for companies looking to reduce their environmental impact. Cardboard tubes for packaging can also be printed or labelled with branding information, making them an effective marketing tool.

# E-COMMERCE ENVELOPES

---

**Our new products are e-commerce envelopes which are designed specifically for online retailers or e-commerce businesses. They are typically used to package and deliver products ordered online, such as clothing, cosmetics, books, and other small items.**

Our e-commerce envelopes come in various sizes and designs to accommodate different products and branding needs. They can be made from cellulose, renewable and paper that can be recycled, which helps to reduce waste and reduce the carbon footprint businesses and may have self-sealing tape to make it easier for customers to seal the bag after they receive their order.

Additionally, e-commerce envelopes can be customized with branding information, such as logos and slogans, to promote brand recognition and customer engagement. This can help to increase customer loyalty and drive sales for online retailers.

# VARIABLE BARCODES & QR CODES

Our new system, which enables the printing of variable barcodes and QR codes on each of the paper bags, brings a revolution in the packaging and sale of goods. These codes are generated using software that assigns a unique code to each paper bag and then prints it onto the bag during the manufacturing process.

QR codes are two-dimensional barcodes that can be scanned using a smartphone or specialized scanner to retrieve information, such as a website URL, product information, or contact details.

By including variable QR and barcodes on paper bags, businesses can improve inventory tracking and provide customers with a convenient way to access product information or promotions.

Additionally, these codes can be used to track bags throughout the supply chain, making it easier to monitor and optimize logistics operations.

# FSC™ CERTIFICATE

**As a socially and environmentally responsible company, in every step of production and business, we keep in mind the preservation of the environment.**

**Intertron is an FSC™ (FSC-C123233) certified company, which means we actively raise environmental awareness and promote production with raw materials from sustainable sources.**

This is the most relevant certificate in the field of forest protection that a company in the paper industry can possess. The certificate is very important both for us and for our clients, but it should be equally important for the end users of our products. The FSC™ mark is a guarantee that the bag is made from wood that comes from a strictly monitored chain: from a certified forest, through processing to production itself. On request, our products can be supplied and manufactured with FSC™ certified material.

## SUSTAINABLE DEVELOPMENT

All our bags are made of cellulose paper, which is a biodegradable material. It takes six to eight weeks for a paper bag to decompose without harming the environment. Due to their quality and strength, they can be used multiple times, but also recycled, which greatly reduces the consumption of new materials for production.

# OUR PARTNERS

## OUR CLIENTS

We are proud of our family tradition company and the values fostered in it.

We strive to provide our clients the best quality products, timely delivery and maximum support in business.

That is why we can boast of long-term cooperation with numerous companies that see us as a reliable partner for the further development of their business.
